The great salad oil swindle. 3-21-209
How to prevent organizational dry rot. 4-4-226
The sheepskin psychosis. 4-4-245
The overweight society. 4-18-231
How to compete with government. 5-2-168
Unsafe at any speed. 5-16-192
Who's polluting our water? 6-13-237
Hospital costs—no way out but up? 6-27-184

DRUGS

Selling drugs in a hospital owned partly by M.D.s. 3-7-167

EDUCATION

When a partner wants a salary in absentia. 2-7-251
Getting scholarship aid for your children. 2-21-197
"We're turning out too many surgeons!" 2-21-226
Medical education—for what? 3-21-100
Why I'd recommend speed reading. 3-21-165
Another way for doctors to keep up. 4-4-124
Where the interns are going. 5-16-70
How serious is the doctor shortage? 5-30-149

EQUIPMENT AND SUPPLIES

Thinking of partnership? Think of *two.* 2-21-186
A charge-plate system saves us time. 3-7-214

Balanced expectorant bronchodilator for prophylaxis and treatment of bronchial asthma, allergic coughs and bronchitis

ISUPREL® brand of isoproterenol
COMPOUND ELIXIR

Each tablespoon (15 ml.) contains:	
Lumina® (brand of phenobarbital) Warning: May be habit forming	6 mg.
Isuprel (brand of isoproterenol) hydrochloride	2.5 mg.
Ephedrine sulfate	12 mg.
Theophylline	45 mg.
Potassium iodide	150 mg.
Alcohol	19%

Vanilla flavored, pleasant tasting

Side Effects and Precautions: Although Isuprel Compound Elixir is generally well tolerated, symptoms of adrenergic overstimulation such as tachycardia or nervousness may occur, in which case the preparation should be temporarily discontinued and administered later at a lower dosage. Reactions to iodide include coryza, fever, acneiform eruptions, erythema of the face and chest, and painful swelling of the salivary glands. These side effects quickly subside on discontinuance of medication. Theophylline may cause gastric intolerance (nausea and vomiting).

The dosage must be carefully adjusted in patients with hyperthyroidism, acute coronary disease, cardiac asthma, hypertension and limited cardiac reserve and in patients sensitive to sympathomimetic amines, since overdosage may result in tachycardia, palpitation, nausea, headache or other epinephrine-like side effects. Caution is also recommended in patients with prostatic hypertrophy and glaucoma.

Isuprel Compound Elixir should not be given to patients known to be sensitive to iodides. Because of its iodide content, the Elixir may cause elevation of the protein-bound iodine. Large doses of iodides should not be administered during pregnancy since they may cause goiter in the fetus.

Dosage: *Children*—
1-3 years, one or two teaspoons, t.i.d.
3-6 years, two or three teaspoons, t.i.d.
6-12 years, one or two tablespoons, t.i.d. as required.

Adults—two tablespoons, t.i.d. or q.i.d. as required.

Isuprel Compound Elixir is supplied in bottles of 16 fl. oz.

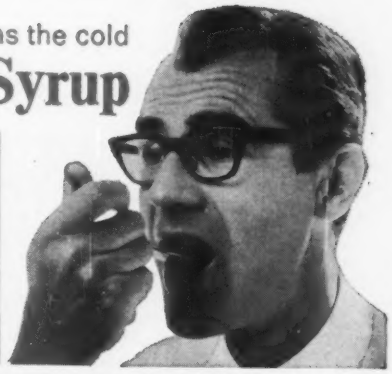
anytime you see a cold coughing

treat the cough as well as the cold

Hycomine® Syrup



Each teaspoonful (5 cc.) contains:	
Hycodan®	
Hydrocodone bitartrate (Warning: May be habit-forming)	5 mg. } 6.5 mg.
Homatropine methylbromide	1.5 mg. }
Pyrilamine maleate	12.5 mg.
Phenylephrine hydrochloride	10 mg.
Ammonium chloride	80 mg.
Sodium citrate	85 mg.
(with methylparaben 0.13% and propylparaben 0.02% as preservatives)	
in a highly palatable cherry-flavored vehicle	

Arrests both productive and nonproductive cough, without suppressing productive cough • decongests the airways • liquefies secretions responsible for irritation • provides prompt symptomatic relief of allergic symptoms • is well tolerated • rarely causes constipation

Average Dosage: Adults, 1 teaspoonful after meals and at bedtime with food. Children 6-12 years, ½ teaspoonful; 3-6 years, ¼ teaspoonful; 1-3 years, 10 drops; 6 months to 1 year, 5 drops. Administer after meals and at bedtime with food. **On oral Rx where state laws permit.**

Caution: Should be used with caution in patients with known idiosyncrasies to phenylephrine hydrochloride and in those with moderate or severe hypertension, hyperthyroidism or advanced arteriosclerosis. In these patients the use should not exceed three days. Hycomine Syrup is generally well tolerated but in some patients drowsiness, dizziness or nausea may occur.

Provides two antibacterial components acting independently to combat infection and impede development of organism resistance. Produces prompt, high concentrations in urine and in kidney tissue

Contraindicated: In individuals hypersensitive to sulfonamides, oxytetracycline, or phenazopyridine HCl. Also, in pregnant females at term, in premature infants, or in newborn infants during the first week of life.

Warning: Reduce usual oral dosage and consider serum level determinations in patients with impaired renal function. Use of oxytetracycline during the last trimester of pregnancy, neonatal period and early childhood may cause discoloration of developing teeth.

During treatment with tetracyclines, individuals susceptible to photodynamic reactions should avoid direct sunlight; if such reactions occur, discontinue therapy.

Note: With oxytetracycline, phototoxicity is unknown and photoallergy very rare.

Sulfonamide therapy has been associated with deaths from hypersensitivity reactions, agranulocytosis, aplastic anemia, and other blood dyscrasias. Therefore, because of its sulfonamide content, Urobiotic should be used only after critical appraisal in patients with liver damage, renal damage, urinary obstruction, or blood dyscrasias. When used intermittently, or for a prolonged period, blood counts and liver and kidney function tests should be performed.

Precautions: Use of this drug may result in overgrowth of nonsusceptible organisms, including fungi. If superinfection occurs, discontinue Urobiotic and institute appropriate specific

SALARIED PRACTICE

Are young M.D.s too business-minded? 1-10-137
What it's like to be an insurance company doctor. 1-10-177

therapy. Use with caution in persons having histories of significant allergies and or asthma. Increased intracranial pressure in infants is a possibility. Symptoms disappear upon discontinuation of therapy.

Adverse Reactions: Glossitis, stomatitis, proctitis, nausea, diarrhea, vaginitis and dermatitis, as well as reactions of an allergic nature, may occur during oxytetracycline therapy, but are rare. If adverse reactions, individual idiosyncrasy, or allergy occur, discontinue medication. As in all sulfonamide therapy, the following reactions may occur: nausea, vomiting, diarrhea, hepatitis, pancreatitis, blood dyscrasias, neuropathy, drug fever, skin rash, injection of the conjunctiva and sclera, petechiae, purpura, hematuria and crystalluria. The dosage should be decreased or the drug withdrawn, depending upon the severity of the reaction.

More detailed professional information available on request.

Urobiotic

Each capsule contains: Terramycin® (oxytetracycline as the HCl) 125 mg. with glucosamine HCl, sulfamethizole, 250 mg.; phenazopyridine HCl, 50 mg.

Suggested Dosage: Adults, 1-2 capsules q.i.d. In acute infections, therapy should be continued for a minimum of seven days or until bacteriologic cure occurs.
